

I'm not a robot!

The manual is coming. I liked my 2nd original edition. On the Lee website, they seem to list which calibers are covered in the 2nd previous edition, revised 2016, shows 300AAC, 6.8 SPC and Grendel/Creedmor. I should be receiving 2019 review and hope 224 is in it, let's see. I have the guide nosler #8 and the 9th edition. Is there a better guide? For which cargo or information? There are usually some calibers for each one. The basic recharge information is the same, although I like Berger and Sierra better. I have the 9th HDY needs to get 100 due to updated cartridges. Depending on bullets of choice, I would keep the relative book of the MFG bullet. Having the others allows you to play with them sometimes listed in your manual. In general it is not bad to build a library with Speer, Nosler, Hdy, Berger, Lyman and Sierra. Little to be desired in the norm of a caliber perspective. Sierra Trown Agglutinating Lube I like it, but I wanted a hard-on vs. the digital. I just realized that they were android and iOS digital formats. If you want some other good reading to find a Ken Howell's Pet Charges, the 2 Volumes Po Ackley along with Zedekers Top Grade Ammo. Rearrs: Dewey7271 I have the last nosler. It is a lot. Berger also, I use Lyman 49 and Hornady 10th. On the internet, the internet usually wins. Requiries: TXGUERO I usually search the pages of choice among the main shooters, finding competition results, then go to the site for my selection of p3 and download data to weight and download appropriate bullet profile. My last adventure to recharge led me to catch Vitiv. P3 as it seemed to be available. Your load data showed N133 as a good choice for .223 REM for a wide variety of bullet weights. Is listed as a base-based push-based push among some of the bank groups. Since I want to end up with 331N Ilhoco sofÁrg a salab 55 faster rate of burning. The N133 would be the best choice for heavier bullets and more not supposed barrels. I own most of the books and recharge volumes listed above. I'm an addict of recharge information and I can't get enough reading material. I took two cartridges of the 9# of the primers N133 and 5000M Match Grade SR through the MidSouth shooter supply this morning. Sierra has recently left with its VI header. It's a big man, a lot of information. I'm a fan of that. I'm a nerd, so I have books from several different MFGs. Some of these books belonged to my father and were dating from the beginning of the 1980s to the present. My reason for this is due to the ability to get data for different posts that may not be listed in a particular book. I can say that the Lyman Book is a mix of data from several different MFGs, so that it can save some money if you are not interested in buying several different books. 99106 is very well tied. Every manual I've ever looked for is a wealth of information. The recharge information on techniques and equipment values and some manuals cover things other than Load data is not consistent between some manuals and sometimes like the 8th Hornady does not seem to make sense. Currently with all new powders on the market, the Internet is becoming the source of data, and powder manufacturers publish the data before releasing the powders. I keep Lyman, Hornady, Speer and Hodgdon in hand all the time. Another vote for Po Ackley's 2 Volume manual for shooters and reels. "The 2nd Edition is a great addition to the field of reloading." I will re-entering the rifle after prolonged hiatus and found that most of the older manuals from the 1980s and 1990s are still useful. But there are many new readers now produced in the Lasers, and I have information about them. So it's time for a wealth of manuals for the rifle to support the internet. Data source, but I've got enough information to add to that the updated manuals are king. My plan is to buy a couple every month for the next 2-3 months, and the first one that will order will be the saws, probably followed by Hornady. There are some important differences between bullet profiles for the two companies and, as they are the most available bullet marks in my area, they will be the first. Lyman 50 is the best I've seen so far. Keep an eye on garage sales, etc. I have several books that I bought as much and some date back to the '60s or '70s. Reactions: Locutus Seeing as I'm a noob to manually load, I read the sixth of Sierra, Lee is updated in the 2018 manual. Nosler's manual and now I'm reading Lyman's 50. I must say that, without a doubt, Lyman's has been the best so far. Yeah, call me the old fashion type, but I have a lot of recharge manuals... like all the damn ones I found out. Then add some I have several editions of... and you understand... the wife and children can touch a bonfire when I leave... for more than a century, the ideal recharge manuals and then Lyman were the main resource of reloads to recharge proven data. Lyman's refill manuals have always used the widest selection of cartridges, bullets and dust from all major manufacturers. This 50th edition continues our tradition of being the only data source using various brands in our data. RCM, 338 RCM, 450 Bushmaster, 458 Socom, 50 Beowulf/Full Color Edition. The 50th anniversary edition is our first recharge manual produced in colored artworks by means of gun writers and specialists in the firearms industry. Co by Ryan Newport. "Advanced case preparation techniques" by John Hayland.
